

CHANNEL SCANNING FEATURE:

You can set any MT-700 unit to scan all (15) channels.

- 1. Put the channel selector to the last channel (16) - constant tone.**
- 2. Turn OFF unit.**
- 3. Press and hold (MON) key (small button lower left) and turn ON unit at same time. Short beep heard.**
- 4. Transceiver is scanning and will flash rapid green light.**
- 5. Channel announcement is heard prior to receiving content.**
- 6. Press (MON) key to temporarily pause scanning, release (MON) key to resume scanning.**
- 7. Turn OFF unit to cancel scanning.**
- 8. Once scanning unit has received content on any channel, it will not receive content from any other channel for at least (48) seconds. This is the factory default setting.**
- 9. We can program units here to have a 5 second delay instead of 48 seconds.**
